Utility Air Circulator

General Description

The FANQUIP Poultry Shed Air Circulator has been designed to offer maximum air movement in poultry sheds, providing more comfortable conditions and a cooler, fresher environment with minimum power consumption.

The unit may be installed with minimum expense, suspended by chains or cables from handles provided on the galvanised casing. Inlet and outlet flares are incorporated in the casings to improve airflow.

Motor

Manufactured by leading Australian motor manufacturers to meet FANQUIP's strict quality requirements, the 240V, 50Hz, totally enclosed ball bearing motor is hoseproof (IP55) and speed controllable with a stainless steel shaft. For larger areas, a three speed motor is available to reduce airflow and power consumption.

Guards

Mesh Guards are standard to resist human ingress.

Performance Data

Model Number	Fan Dia. mm	Weight kg w	Motor Speed r/s	Motor W	Current Amps	Free Air Volume l/s
17-81161	800	25	16	350	2.7	5115
